Re: Docket 10-0202 Aggregated Net Metering (ANM)

E-00000J-10-0202

Dear Director Olea and Mr. Fox,

I recently heard of your commendable leadership in conducting a workshop exploring the potential benefits of ANM and I understand the Arizona Corporation Commission may make a determination in November to enhance existing Net Metering rules to allow ANM. I am writing this letter to convey my total and absolute support of ANM.

Amonix is the leading designer and manufacturer of concentrator photovoltaic (CPV) solar power systems which require no water for power production, use land more efficiently and are most suitable for dry sunny climates such as Arizona's. Amonix CPV technology incorporates industry's highest efficiency solar cells with dual-axis tracking of the sun to produce more energy per acre than any other solar technology. The Amonix 7700 product introduced to the market last year was the recipient of a 2010 R&D award as one of the year's most innovative technology product. The 7700 is a large unit not suitable for rooftops (see www.amonix.com). Instead the 7700 can generate cost-effective electricity for large-scale utility or commercial enterprises.

While Amonix has a manufacturing facility in Seal Beach, California, it received \$3.6 million in stimulus funding as part of the federal Recovery Act's Advanced Energy Manufacturing Tax Credit to build a permanent manufacturing operation in Arizona in 2011. The Arizona facility will create 167 new clean energy manufacturing jobs.

It is critical to our future in Arizona that the ACC allow establishment of solar electric facilities not to exceed a customer's "total" load made up of the aggregated or sum of all their metered loads on sites that may be remote from their actual loads and credit that generated power to their many meters. An ACC determination in favor of ANM will support our planned manufacturing facility next year that will provide clean energy jobs and new tax revenue in Arizona. Further, ANM will enhance the prospects for larger scale energy production using Arizona's abundant solar resource, reduce generated solar energy costs to compete with electric utility rates and speed the elimination of local subsidies.

Please do not hesitate to contact me for further information.

Sincerely,

Brian Robertson, CEO

Arizona Corporation Commission
